

Complete Protection

Chimneys require special attention to prevent costly damage, which results from water penetration. Chimneys project above the roof line and are highly vulnerable to the elements.

A complete chimney protection program should include repairing the crown with CrownCoat, as well as a treatment with **ChimneySaver**[®], a 100% breathable siloxane based water repellent. Flue tiles should have a chimney cap to help prevent water damage to chimney interiors. Attention should also be given to the flashing around the base of the chimney and all visible points of water entry should be repaired.

Occasional maintenance of a chimney exterior is critical to the long term safety and performance of masonry chimneys.

CrownCoat[™]

15 YEAR WARRANTY

SaverSystems warrants that CrownCoat Brushable Sealant, when used to coat or repair masonry chimney crowns, will remain intact and in place for 15 years from the date of application to a residential chimney crown according to label instructions when properly applied by a professional contractor. This warranty does not cover spalling, abrading, faulty construction and/or other defects which might erode coated surfaces.

If CrownCoat fails to perform as specified, SaverSystems will furnish, as sole remedy, enough CrownCoat to correct the condition. This warranty does not include labor or cost of labor for the application of CrownCoat. SaverSystems shall not be liable for incidental or consequential damages resulting from any breach of this warranty and fitness for use. Some states do not allow the exclusion of incidental or consequential damages, so the above exclusions may not apply to you. This warranty gives you specific legal rights. You may also have other rights which vary from state to state.

Available from professional contractors throughout North America.

CrownCoat[™]

Repairs Damaged Chimney Crowns

Maximum protection, guaranteed to last!

CrownCoat™

is specifically formulated to withstand the severe weather and thermal stress to which chimneys are exposed.

What is a chimney crown?

A chimney crown is a masonry roof that covers the top of your chimney. It prevents water from seeping into the masonry below. Water damaged or cracked chimney crowns can lead to costly chimney repairs.

The crown solution.

CrownCoat is a flexible waterproof sealant that is applied over the entire chimney crown. A professionally installed CrownCoat application stops further water intrusion through the crown and carries a 15 year warranty.
